Air and Oxygène

Since the successful launch of Oxygène Yachts' Air 77 model presented at last year's Cannes Yachting Festival, the brand has a definitive version and three new models on the way.

Images Oxygène Yachts

Throughout 2014, Oxygène Yachts have added three new models to their range of 66-99 foot boats, and all three will be presented at the Cannes Yachting Festival 9 to 14 September.

Oxygène's signature design with pure lines and on-board space, sprung from designer Frédéric Sarfati who aimed to create a new aesthetic for power catamarans that wasn't glitzy or ostentatious.

The range features a glass roof and front opening for maximum ocean views.

Apart from the variation in size, the Air 66 is the most compact boat in the range and is even easier to handle than the Air 77. With glass roof and front opening, the view from the stern reveals an unbroken view of the horizon. As a development on the Air 77, the Air 77 W essentially presents aesthetic variations: raised bulwarks, remodelled hulls and deck and a dingy integrated under the main deck. The Air 99 offers the most space in the range with six cabins and a large living space.

A key aspect to all three concepts is the integrated variable transparency glass. The double glazing on windows throughout the boats becomes darker or brighter according to the amount of sunlight thanks to an electronic process incorporated into the glass. The more sunlight there is, the more the glass darkens. It restricts light transmission and limits heat generation making it suitable for Australia. When sunlight is weak however, the transparent glass allows the light in.

The integrated variable transparency glass lightens or darkens according to the amount of sunlight.

The choice of ultrajet/masterjet turbine engines means the boats are easy to handle and can weave in and out of small bays and creeks. The engines have an intentionally restricted top speed for each model and very reasonable fuel consumption.

The brand has signed a partnership agreement with Couach Shipyard for the construction of the definitive version of the Air 77 and will be at the Cannes Yachting Festival 9 to 14 September.

FROM THE EDITOR

This week OceanLIVE is predominantly about launches and brokerage yachts at the Cannes Yachting Festival, which is underway at what must be one of the world's most beautiful marinas.

Our lead story though is a local launch: the much-anticipated debut of the first hull under the Elandra brand, the Elandra 53. Under clear but cool Gold Coast skies, this striking motoryacht was launched to friends, family, colleagues and clients at a soiree at Palazzo Versace – fit for a regal, yet powerful long-range cruiser. Our congratulations to Luke, Grant, Billy and the team at this boutique Australian boat yard. We will have a thorough review of the Elandra 53 in the November-December issue of Ocean magazine.

British brand, Princess is working on its new 100-foot Princess 30M, which will be positioned as the entry to the M Class fleet, and is every inch a luxury superyacht, launching in 2015.

Finally, a round-up of the Top 5 in Cannes in terms of size, from the magnificent new 55-metre Azimut Benetti, Ocean Paradise to brokerage behemoth, TJ Esperanza by the Amels yard, for sale through Yacht & Villa International.

We will have more from Cannes and a preview from Monaco next week.

Til then, see you on the water!

Couach Le « Belongers » nourrit les espoirs du chantier

Livré en mai dernier, le « Belongers » est l'atout de Couach pour gagner des galons dans le milieu des constructeurs de yachts. Une carte de visite qui a été l'un des éléments déterminants à la signature d'un 44 mètres au début de l'été.

Le chantier Couach, mis sur le « Belongers », mis à l'eau en février, pour lui apporter de nouveaux clients.

« On est entré dans la cour des grands. On a démontré que l'on était capable de construire un grand yacht digne de ce nom. », Christophe Kloeckner, le PDG de Couach, est enthousiasmé. La livraison, le 31 mai, du Belongers, second yacht de 50 mètres réalisé par le chantier naval gendrin, s'est passée sans anicroche. Mieux, son propriétaire russe « était content », a cru déceler le patron du constructeur de Gujan-Mestras. Ce n'était pas couru d'avance. Le client avait démonté par le passé qu'il n'était pas du genre à se contenter d'un peu-rien.

Agacé du retard pris dans la construction de son navire, commandé sous l'ère de Fabrice Vial, l'ancien propriétaire du chantier assassiné en 2011, il n'avait pas hésité quelques mois après

à casser le contrat avec Couach, racheté entre-temps par la société Nepteam. Demandant alors le remboursement des 3 millions d'euros déjà versés, il avait contraint les nouveaux dirigeants du chantier à le placer sous procédure de sauvegarde. Avoir réussi à retrouver la confiance de son client puis à satisfaire apparemment ses exigences n'est donc pas pour Couach la moindre des réussites.

« Quand on prend un engagement, on le tient », résume Christophe Kloeckner. Le chantier a d'abord tenu le délai de quatorze mois pour achever la construction du yacht, placée sous plusieurs niveaux de contrôle par le propriétaire qui a notamment fait appel aux services de l'entreprise Winterbootsma, superviseur anglais spécialisé dans

le yachting. Les performances du navire en termes de bruit et de vibration ayant été définies par contrat, Couach a aussi su élever ses standards en la matière.

Une attention particulière a ainsi été portée sur l'isolation des parois du yacht et les portes de communication. Les modes de montage pour les cabines ont été revus. Elles ne reposent plus directement sur la structure de la coque mais sur des silent-blocs qui font office d'amortisseurs. Pour atténuer le roulis, quatre stabilisateurs gyroscopiques remplaçant désormais les appendices placés sous la coque qui avaient été utilisés pour La Pellegrina, le premier 50 mètres livré par le chantier en 2012.

Le chantier espère trouver là un atout pour attirer de nouveaux clients, il voit, du reste, dans la signature du contrat au début de l'été, par un client français, d'un yacht de 44 mètres la concrétisation de ce travail. « Les efforts menés pour la construction du second 50 mètres payent », insiste Christophe Kloeckner.

« Pas question pour autant de signer n'importe quoi. Je sais maintenant que l'on fait un très beau yacht de 50 mètres, aux standards mondiaux. Nos bases sont saines pour un redémarrage. Alors si l'enjeu pour le chantier est évidemment de remplir son carnet de commandes, cela doit se faire de manière profitable », prévient Christophe Kloeckner. Le montant de la commande pour le 44 mètres se situerait aux alentours de 35 millions d'euros.

UNE NOUVELLE COMMANDE

« On a progressé. Le chantier a mûri », souligne Christophe Kloeckner. Sur ce qu'il a déjà pu entendre sur le Belongers, il n'est pas le seul à le penser. « On a été approché par un important broker qui voulait que l'on partage son stand lors du salon de Monaco », poursuit-il. Décision n'a pas encore été prise d'accepter ou pas l'invitation, mais le chantier apprécie

Loïc FABRÈGUES

Le pari des services

La diversification des activités du chantier, entreprise par les dirigeants de Couach depuis son rachat en novembre 2011 par la holding Nepteam, se poursuit avec la création, cet hiver, de Couach services. Filiale de Nepteam, comme Blue ou Ysec qui porte le projet d'un chantier de refit sur l'ex-base aéronavale de Saint-Mandrier, Couach services propose toute une série de prestations. Des services qui vont du simple hivernage de navires aux opérations de refit en passant par l'entretien ou la réparation des embarcations lors de leur séjour hivernal dans l'emprise du chantier, à Gujan-Mestras.

Pour son lancement, l'entreprise, qui n'a pas vocation à avoir de nombreux salariés mais à faire intervenir les équipes du chantier Couach, a accueilli une trentaine d'embarcations de particuliers, mais aussi des navires à passagers de l'Union des bateaux archaïques. Elle est, par ailleurs, en pourparlers pour effectuer un refit sur un catamaran de luxe conçu par Oxygène Yachts. « Un diagnostic et un devis des travaux à envisager ont été établis, nous devons désormais sous peu le programmer », indique Christophe Kloeckner, PDG de Couach.

Plus original, Couach fait partie du consortium Blue Shark Atlantique qui a déposé un dossier dans le cadre de l'appel à manifestation d'intérêt pour les fermes pilotes hydroliennes dans le raz Blanchard. Un projet pour lequel le chantier devait d'abord lancer à l'automne la fabrication du prototype définitif de l'hydrolienne exploitée exclusivement par Blue Shark Power System, société basée à Biscarrosse, près de Bordeaux, puis par la suite, en réalisant la production industrielle.

Plus original, Couach fait partie du consortium Blue Shark Atlantique qui a déposé

un dossier dans le cadre de l'appel à manifestation d'intérêt pour les fermes pilotes hydroliennes dans le raz Blanchard. Un projet pour lequel le chantier devait d'abord lancer à l'automne la fabrication du prototype définitif de l'hydrolienne exploitée exclusivement par Blue Shark Power System, société basée à Biscarrosse, près de Bordeaux, puis par la suite, en réalisant la production industrielle.

Le « Breathe Me » d'Oxygène Yachts devrait subir une opération de refit au chantier Couach.

LA SITUATION FINANCIÈRE S'ÉCLAIRCIT

Le chantier naval Couach n'a pas encore totalement régulé sa situation financière, mais elle s'est grandement améliorée. L'entreprise, qui s'était placée en procédure de sauvegarde en août 2012, sous la menace de deux procédures pour un montant de 12 millions d'euros, a vu ces deux dossiers évoluer dans le bon sens. En réussissant à convaincre son client russe de revenir sur sa décision de rompre le contrat pour la construction de son yacht de 50 mètres, Couach a réglé la question des 9 millions d'euros d'acompte versé par celui qui est désormais le propriétaire du Belongers.

Sur le différend entre Couach et un établissement bancaire pour l'utilisation du moule du 50 mètres, « le tribunal de commerce de Bordeaux a jugé que nous n'avions pas à payer les 3 millions d'euros qu'on nous demandait et que le moule restait notre propriété. La banque a décidé de se retirer en s'assurant mais cela ne pourrait porter que sur un vice de forme et je n'en vois pas », indique Christophe Kloeckner, le PDG de Couach. Le plan de sauvegarde du chantier, validé en juillet 2013, ne porterait donc plus désormais que sur le remboursement sur dix ans d'1,5 million d'euros de créances.

Oxygène Yachts déploie une gamme de quatre multicoques à moteur.

3 septembre 2014 par James C / Rubrique : [Transport](#)

Oxygène Yachts va profiter du Cannes Yachting Festival 2014 pour présenter sa gamme de quatre multicoques à moteur toujours aussi étonnants. Des unités de 66 à 99 pieds qui forme une gamme harmonieuse dans l'esprit Oxygène.

En septembre 2013, Oxygène yacht présenté à Cannes son Air 77 prototype. Un catamaran au design novateur qui a bousculé le secteur dans ses habitudes avec une conception de l'espace et une fluidité des déplacements inattendus. Outre son design très caractéristique, l'Air 77 s'est fait remarquer par une immense porte de 10 m2 à l'avant du roof rompant avec la classique séparation des espaces

intérieurs et extérieurs.

Depuis, Oxygène Yachts a conclu un accord de collaboration avec le Chantier Naval Couach pour la construction de la version finalisée qui sera présentée au cours du printemps 2015. Mais Oxygène Yacht ne s'arrête pas là, puisqu'en 2014 la gamme s'enrichit de trois nouveaux modèles.

La légèreté de ces bateaux, de fabrication strip planking (bois, époxy et composite verre / carbone) ainsi que leur faible tirant d'eau combiné à une propulsion par turbines UltraJet / Masterjet leur confèrent un atout technique majeur : une excellente maniabilité. Ainsi, ils accèdent au plus proche du littoral et se manœuvrent aisément dans les petites baies et calanques, même lorsqu'il s'agit d'un 99 pieds.

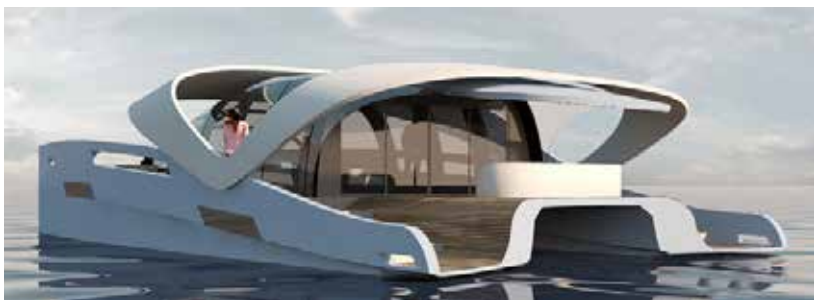

L'Air 66 est le plus compact de la gamme. Reprenant tous les attributs de l'Air 77, il gagna encore en maniabilité et occupe une place réduite au port. Avec un espace de 200 m2 habitables pour seulement 19mètres de long, la vie à bord de l'Air 66 évolue autour du carré, qui offre à l'usager un lieu de vie et de partage de 60 m2.

Evolution de l'Air 77, l'Air 77 W présente des variations essentiellement esthétiques : pavois rehaussés, coques et deck remodelés et annexe intégrée sous le pont principal. Ce bateau illustre les possibilités de design et de variations qui peuvent s'adapter au désir du client.

L'Air 99, c'est le yacht No-limit. Cette unité propose sur ses 30 mètres de long 6 cabines et 400 m2 habitables. Il impressionne par une forme de démesure à la fois sereine et voluptueuse. Un carré de 120 m2 traité à la manière d'un loft permet de vivre une sensation de liberté unique.

CHARTER A BOAT

Oxygene Yachts offers a four-boats range of powered multihull: as amazing as ever

Oxygène Yachts during the course of 2014 has expanded by adding to its Air 77 three new models - Air 66, Air 77W and Air 99-the no limit yacht - to form a well-balanced range of 66 to 99 foot boats.

Three new worthy representatives of the Oxygène spirit will be presented at this year's Cannes Yachting Festival. In September 2013, Oxygène Yachts presented its Air 77 prototype at Cannes: a power catamaran with an exceptional design challenging old habits in the industry and establishing a new idea of space and fluidity of movement.

In addition to its highly characteristic design, the Air 77 also attracted attention for its huge 33 sq ft door cut into the front of the roof: a move away from the traditional way of separating indoor and outdoor space. The result offers an entirely unobstructed space and view on the main deck.

Since then, Oxygène Yachts has signed a partnership agreement with Couach Shipyard for the construction of the definitive version. This model will be presented to the press and public for trials during Spring 2015.

But Oxygène Yachts didn't just stop there. During the course of 2014, the brand has expanded by adding three new models to form a well-balanced range of 66 to 99 foot boats. Three new worthy representatives of the Oxygène spirit will be presented at this year's Cannes Yachting Festival.

Spirit of OXYGENE : purity and discretion... a unique stance

The remarkable design of Oxygène Yachts sprung from designer Frédéric Sarfati's strong determination: to breathe new aesthetic inspiration into the universe of power catamarans.

This inspiration is driven by the relentless quest for pure lines and on-board space. A quest for subtlety and balance that allows the boat to blend into its surrounding environment. The result is impressive: a highly characteristic design rendered timeless by the simplicity of its lines. The name of the range does justice to this notion of space and movement: AIR. Nothing glitzy or ostentatious about the Air boat range. AIR 77W

AIR range: harmony and sensuality

The lightness of the models in the Air range, made with strip planking (wood/epoxy and glass/carbon composite), their shallow draught and Ultrajet/Masterjet turbine engines give them a major technical advantage: they are incredibly easy to handle. They get as close as possible to the coastline, and weave easily in and out of small bays and creeks, even the most imposing models of the line! The choice of engines goes towards defining the brand's spirit, with a intentionally restricted top speed for each model and very reasonable fuel consumption.

The Air 66 is the most compact boat in the range. With all the characteristics of the Air 77, it is even easier to handle and takes up less space when docked. With 2152 sq ft of living space for a length of just 66 feet, life onboard the Air

ON THE SPOT

Available @ Google play

66 centres around the "carré" which alone offers an area of 645 sq ft for sharing enjoyable moments. With its glass roof and front opening, the view from the stern reveals a 52 ft perspective in the axis of the boat and an unbroken view of the horizon.

As a development on the Air 77, the Air 77 W essentially presents aesthetical variations: raised bulwarks, remodelled hulls and deck, dingy integrated under the main deck... It illustrates all the design and variation opportunities of a concept that Frédéric Sarfati's brush stroke adapts to each client's individual desires.

Air 99 – the No-limit yacht.

At the very least the 99 foot Air 99 is out of the ordinary, offering six cabins and 4305 sq ft of living space! While maintaining the harmony inherent to the concept of the AIR range, this boat makes its mark with an impression of outrageous serenity and sensuality. The 1292 sq ft "carré" designed in the style of a loft offers a unique sensation of freedom. The 88 foot perspective unfolds uninterrupted towards the horizon through the vast doorway at the front, suggesting an invitation to escape offered by no other boat today.

Innovation: variable transparency glass

To fit out the glass roofs present on each model in the AIR range, Oxygène Yachts looked at integrating variable transparency glass, a revolution in the nautical sector that finally makes it possible for widespread use of bay windows with no fear of adverse effects from the sun.

The double glazing becomes darker or brighter according to the amount of sunlight thanks to an electronic process incorporated into the glass. At the heart of this process is an electrochromatic coating and a low voltage current making it possible to constantly adapt the tint of the glass to variations in sunlight. The more sunlight there is, the more the glass darkens. It restricts light transmission and limits heat generation. When sunlight is weak, the transparent glass allows the light in, optimising the beneficial effects of the solar flux.

Controlling the lightness level is as simple as the touch of a button on the wall. It can also be done automatically with a light intensity sensor.

By using variable transparency glass, the Air concept and its vast curved windows maximizing light takes on its true meaning.

Oxygène Yachts Offers A Four-Boats Range Of Powered Multihull

An Extraordinary Project

In September 2013, Oxygène Yachts presented its Air 77 prototype at Cannes: a power catamaran with an exceptional design challenging old habits in the industry and establishing a new idea of space and fluidity of movement.

In addition to its highly characteristic design, the Air 77 also attracted attention for its huge 33 sq ft door cut into the front of the roof: a move away from the traditional way of separating indoor and outdoor space. The result offers an entirely unobstructed space and view on the main deck.

Since then, Oxygène Yachts has signed a partnership agreement with Couach Shipyard for the construction of the definitive version. This model will be presented to the press and public for trials during Spring 2015.

But Oxygène Yachts didn't just stop there. During the course of 2014, the brand has expanded by adding three new models to form a well-balanced range of 66 to 99 foot boats. Three new worthy representatives of the Oxygène spirit will be presented at this year's Cannes Yachting Festival.

Spirit Of OXYGENE : Purity And Discretion... A Unique Stance

The remarkable design of Oxygène Yachts sprung from designer Frédéric Sarfati's strong determination: to breathe new aesthetic inspiration into the universe of power catamarans.

This inspiration is driven by the relentless quest for pure lines and on-board space. A quest for subtlety and balance that allows the boat to blend into its surrounding environment.

The result is impressive: a highly characteristic design rendered timeless by the simplicity of its lines. The name of the range does justice to this notion of space and movement: AIR.

Nothing glitzy or ostentatious about the Air boat range.

AIR Range: Harmony And Sensuality

The lightness of the models in the Air range, made with strip planking (wood/epoxy and glass/carbon composite), their shallow draught and Ultrajet/Masterjet turbine engines give them a major technical advantage: they are incredibly easy to handle. They get as close as possible to the coastline, and weave easily in and out of small bays and creeks, even the most imposing models of the line! The choice of engines goes towards defining the brand's spirit, with an intentionally restricted top speed for each model and very reasonable fuel consumption.

The Air 66 is the most compact boat in the range. With all the characteristics of the Air 77, it is even easier to handle and takes up less space when docked. With 2152 sq ft of living space for a length of just 66 feet, life onboard the Air 66 centres around the 'carré' which alone offers an area of 645 sq ft for sharing enjoyable moments. With its glass roof and front opening, the view from the stern reveals a 52 ft perspective in the axis of the boat and an unbroken view of the horizon.

As a development on the Air 77, the Air 77 W essentially presents aesthetical variations: raised bulwarks, remodelled hulls and deck, dingy integrated under the main deck... It illustrates all the design and variation opportunities of a concept that Frédéric Sarfati's brush stroke adapts to each client's individual desires.

AIR 66

Air 99 – the No-limit yacht. At the very least the 99 foot Air 99 is out of the ordinary, offering six cabins and 4305 sq ft of living space! While maintaining the harmony inherent to the concept of the AIR range, this boat makes its mark with an impression of outrageous serenity and sensuality. The 1292 sq ft "carré" designed in the style of a loft offers a unique sensation of freedom. The 88 foot perspective unfolds uninterrupted towards the horizon through the vast doorway at the front, suggesting an invitation to escape offered by no other boat today.

INNOVATION: Variable Transparency Glass

To fit out the glass roofs present on each model in the AIR range, Oxygène Yachts looked at integrating variable transparency glass, a revolution in the nautical sector that finally makes it possible for widespread use of bay windows with no fear of adverse effects from the sun.

The double glazing becomes darker or brighter according to the amount of sunlight thanks to an electronic process incorporated into the glass. At the heart of this process is an electrochromatic coating and a low voltage current making it possible to constantly adapt the tint of the glass to variations in sunlight. The more sunlight there is, the more the glass darkens. It restricts light transmission and limits heat generation. When sunlight is weak, the transparent glass allows the light in, optimising the beneficial effects of the solar flux.

Controlling the lightness level is as simple as the touch of a button on the wall. It can also be done automatically with a light intensity sensor.

By using variable transparency glass, the Air concept and its vast curved windows maximizing light takes on its true meaning.

Oxygène Yachts selects Couach shipyard as construction partner

Thursday, 4 September 2014

By Gemma Fottles

The Air Range from Oxygène Yachts will be unveiled at the Cannes Yachting Festival. The *Air 66*, *Air 77W* and *Air 99* have all been added to the range this year in addition to the original *Air 77*, the prototype of which was presented at Cannes 2013.

The *Air 77* is a power catamaran, and attracted attention for her huge 33 sqft door cut into the front of the roof - a move away from the traditional way of separating indoor and outdoor space. Since then, Oxygène Yachts has signed a partnership agreement with Couach Shipyard for the construction of the new range. This model will be presented to the press and public for trials during Spring 2015.

Across the whole range, the lightness of the models, their shallow draught and Ultrajet/Masterjet turbine engines means that they are incredibly easy to handle. Every model has an intentionally restricted top speed and very reasonable fuel consumption. Innovations on board include double glazing which becomes darker or brighter according to the amount of sunlight thanks to an electronic process incorporated into the glass.

Линейка Air будет представлена Oxygene Yachts в этом месяце на Cannes Yachting Festival

Oxygene Yachts рада сообщить, что ее линейка Air будет представлена на этом месяце на Cannes Yachting Festival, который пройдет в средиземноморских Каннах с 9 по 14 сентября. Экспозиция будет организована на Espace Riviera, стенд 061.

Суперяхта Air 99 от Oxygene Yachts - профиль

Oxygene Yachts - французская компания, которая проектирует и строит роскошные моторные катамараны и предлагает новую интерпретацию досуга в мире яхтинга. Она разрабатывает и строит яхты исключительно на заказ, т.е. единственные в своем роде яхты. Уникальный дизайн, который опережает нынешние тенденции, с гладкими и четкими линиями, делает их яхты выразительными и элегантными.

В сентябре 2013 года, в Каннах, Oxygene Yachts представила прототип своей яхты Air 77: моторный катамаран с уникальным дизайном, который бросает вызов старым привычкам в промышленности и создает новое понимание пространства и текучести движения.

В дополнение к своему сложному дизайну, роскошная яхта Air 77 также привлекает внимание своим огромным, 33 квадратных футов, дверным проемом в передней части крыши. Отходя с помощью этого решения от традиционного разделения крытых и открытых пространств, дизайнер предлагает совершенно беспрепятственное перетекание пространств и уникальный вид на главную палубу.

Суперяхта Air 99 от Oxygene Yachts - кормовой вид

Oxygene Yachts подписала соглашение о партнерстве с Couach Shipyard для строительства окончательной версии яхты и весной 2015 модель будет представлена прессе и общественности для обсуждения.

Но Oxygene Yachts не останавливается на достигнутом. В течение 2014 года, бренд расширил свою линейку Air, добавив три новые модели, чтобы сформировать сбалансированный ассортимент яхт в диапазоне от 66 до 99 метров. И в этом году три новых достойных представительницы в духе Oxygene будут представлены на Каннском яхтенном фестивале.

Суперяхта Air 99 от Oxygene Yachts – вид сверху

Дух Oxygène – это чистота и свобода, и уникальная позиция.

Примечательно, что дизайн Oxygene Yachts возник из твердой уверенности дизайнера Frédéric Sarfati в необходимости вдохнуть новое эстетическое вдохновение в мир моторных катамаранов. И это вдохновение движет неустанной борьбой за чистые линии и бортовое пространство яхт. Стремление к тонкости и балансу в дизайне, позволяет яхте гармонировать с окружающей средой и сливаться с ней.

Суперяхта Air 77 от Oxygene Yachts - профиль

Результат оказался впечатляющим: очень характерный дизайн поражает простотой и современностью своих линий, а название линейки «воздух» олицетворяет само понятие, интегрируя в нем сущность пространства и движения.

Ничего блестящего или показного в линейке моторных яхт Air нету.

Роскошная суперяхта Air 77 от Oxygene Yachts – кормовой вид

Линейка Air – это гармония и чувственность.

Легкость моделей линейки Air, сделанных из композитных материалов и стекла, малая осадка и оборудование движительной системы газотурбинными двигателями, дают линейке Air основные технические преимущества. Яхтами этой модели легко управлять, они близко подходят к берегу на мелководье, в бухтах и заливах, даже те из них, у кого самые внушительные размеры.

Роскошная суперяхта Air 77 от Oxygene Yachts - салон

Яхта Air 66 является самой компактной лодкой в диапазоне. При все тех же достоинствах, что имеет Air 77, она даже проще в обращении и занимает меньше места на стоянке. При 66 футах длины, яхта Air 66 располагает 2152 квадратными футами жилой площади. Вокруг надстройки, «каре», на ее борту располагается открытая зона, площадью 645 квадратных футов, где можно наслаждаться морской природой. Благодаря стеклянной крыше и открытому дверному проему впереди, с кормы открывается непрерывный вид, проходящий на 55 футов по оси салона до горизонта.

Яхта Air 77 W представляет вариант развития модели Air 77. В ней выполнены некоторые изменения эстетического плана: подняты фальшборты, по иному смоделированы корпуса и палуба, главная палуба и надстройка объединены темной конструкцией крыши... Это иллюстрирует возможности концепции, когда дизайнер Frédéric Sarfati, что называется «мазком кисти» вносит изменения в проект и адаптирует его к индивидуальным пожеланиям владельца.

Роскошная суперяхта Air 77 от Oxygene Yachts - каюта

Яхта Air 99 – самая крупная яхта линейки. Она располагает шестью каютами и 4305 квадратными футами жилой площади! Сохраняя гармонию, присущую концепции линейки Air, эта лодка производит сильное впечатление своим невозмутимым спокойствием и чувственностью. Ее надстройка, «каре», площадью 1292 квадратных футов, разработанная в стиле лофт, предлагает неповторимое ощущение свободы. 88-футовая перспектива, которая открывается с кормы через всю яхту по оси надстройки до горизонта, благодаря фронтальному проему, не имеет себе равных ни на одной существующей сегодня яхте и представляет заманчивую особенность яхты Air 99.

Роскошная суперяхта Air 77 от Oxygene Yachts - ванная комната

Линейка Air представляет одно из инновационных решений - стеклянные крыши. Oxygene Yachts, применив инновационное стекло с переменной прозрачностью в зависимости от освещенности, совершила революционный шаг в морской индустрии. Теперь можно говорить о широком использовании стеклянных конструкций, в том числе эркеров, не опасаясь побочных эффектов от солнечного освещения.

В зависимости от количества солнечного света, двухслойное остекление становится темнее или светлее, благодаря электронным процессам, возникающим в его конструкции. В основе этого процесса лежит электрохромное покрытие и ток низкого напряжения, позволяющие постоянно адаптировать оттенок стекла к изменениям потока солнечных лучей. Чем больше солнечного света, тем больше стекло темнеет. Это ограничивает светопропускание и прохождение тепла через стекло. Когда солнечный свет слабый, прозрачное стекло пропускает солнце вовнутрь, оптимизируя благотворное воздействие солнечного потока.

Моторная яхта Air 66 от Oxygene Yachts

Основные технические характеристики яхт линейки Air:

Моторная яхта Air 66

Длина корпуса: 19 м/66'

Ширина: 9,50 м/31'

Осадка: 0,80 м

Максимальная скорость: 12/30 узлов

Двигатели: 2xVolvo, мощностью 300/600 л.с.

Пропульсивная система: винты UltraJet /турбины MasterJet

Каюты: 4 каюты + 2 каюты экипажа

Дизайн: Frédéric Sarfati

Военно-морская архитектура: Couach Shipyard

Строительство: Oxygene Yachts в сотрудничестве с Couach Shipyard

Моторная яхта Air 77

Длина корпуса: 23,50 м/77'

Ширина: 10,40 м/34'

Осадка: 0,80м

Максимальная скорость: 14/22 узлов

Двигатели: 2xVolvo, мощностью 260/600 л.с.

Пропульсивная система: винты UltraJet /турбины MasterJet

Материал конструкции корпуса и надстройки: дерево/ эпоксидная смола /стекло/композитный материал на основе углеродного волокна

Стеклянная крыша: формованный Plexiglas Anti-UV или стекла с переменной прозрачностью

Каюты: 4 каюты + 2 каюты экипажа

Дизайн: Frédéric Sarfati

Военно-морская архитектура: Couach Shipyard

Строительство: Oxygene Yachts в сотрудничестве с Couach Shipyard

Моторная яхта Air 99

Длина корпуса: 30м/99'

Ширина: 11,80м/38'

Осадка: 1,4м

Максимальная скорость: 20/30 узлов

Двигатели: 2xMTU, мощностью 800/1600 л.с.

Пропульсивная система: винты UltraJet /турбины MasterJet

Материал конструкции корпуса и надстройки: дерево/ эпоксидная смола /стекло/композитный материал на основе углеродного волокна

Oxygene Yachts в Каннах

04.09.2014

На сентябрьской яхтенной выставке в Каннах верфь Oxygene Yachts представит сразу 4 модели из линейки Air, в которую входят моторные многокорпусные яхты. На Cannes Yachting Festival 2014 (9-14 сентября) состоится официальная премьера обновленного модельного ряда бренда (Espace Riviera – стенд 061).

В 2014 году в линейку к Air 77 добавилось сразу три новых модели длиной от 66 до 99 футов: Air 66, Air 77W и Air 99. Премьера прототипа первой яхты этой серии - Air 77 – состоялась также в Каннах, но в прошлом году. На выставке 2013 года посетители смогли увидеть концепт нового моторного катамарана с впечатляющим дизайном, в котором создатели воплотили свое видение эргономики пространства и идею свободных передвижений.

Впоследствии Oxygene Yachts заключила партнерское соглашение с верфью Couach Shipyard на строительство финальной версии катамарана Air 77. Мировая премьера этой яхты запланирована на весну 2015 года.

Cannes Boat Show

5 September 2014 by Risa Merl

[Oxygene Yachts](#) and [Couach Shipyard](#) have announced the debut of their new Air 99 luxury yacht at this year's Cannes boat show.

The Air 99 luxury yacht will debut at the Cannes boat show

The largest in the Air series, the 30 metre catamaran was the result of a collaboration between Oxygene and Couach, the historic yacht builder based in Gironde, France. The luxury yacht follows [Couach's delivery of the 5000 Fly superyacht Belonges](#).

With naval architecture by Couach Shipyard and design by Frederic Sarfati, the catamaran was constructed in composite carbon. She features an 11.8 metre beam with wooden decking and has a displacement of 70 tons.

With a loft-inspired interior, the Air 99 features a large square-shaped main saloon with the standard Air glass roof. The roof is fitted with variable double-glazed transparency glass with electrochromatic coating that becomes darker or lighter according to the amount of sunlight outside. The hue of the glass can also be manually controlled.

The catamaran boasts six staterooms including two master cabins, all with en suite bathroom facilities, and two crew cabins.

The Air 99 is powered by twin MTU 800-1,600hp engines and propelled by two UltraJet/MasterJet turbines. She has a cruising speed of 12-20 knots and a top speed of 20-30 knots.

Oxygene Yachts will also present its Air 66 and Air 77W at the Cannes boat show.

Oxygene Yachts Air range to be presented at this month's Cannes Yachting Festival

September 03, 2014

[Oxygene Yachts](#) is delighted to announce that their Air range will be unveiled at this month's [Cannes Yachting Festival](#), running in the fantastic [Mediterranean](#) yacht charter destination – [Cannes](#) from September 9 to 14, 2014. The company will be on hand at Espace Riviera – Stand 061.

Superyacht AIR 99 by Oxygene Yachts - Profile© Oxygene Yachts

An extraordinary project

In September 2013, Oxygène Yachts presented its Air 77 yacht prototype at Cannes: a power catamaran with an exceptional design challenging old habits in the industry and establishing a new idea of space and fluidity of movement.

In addition to its highly characteristic design, the luxury yacht Air 77 also attracted attention for its huge 33 sq ft door cut into the front of the roof: a move away from the traditional way of separating indoor and outdoor space. The result offers an entirely unobstructed space and view on the main deck.

Oxygene Yachts Air range to be presented at this month's Cannes...

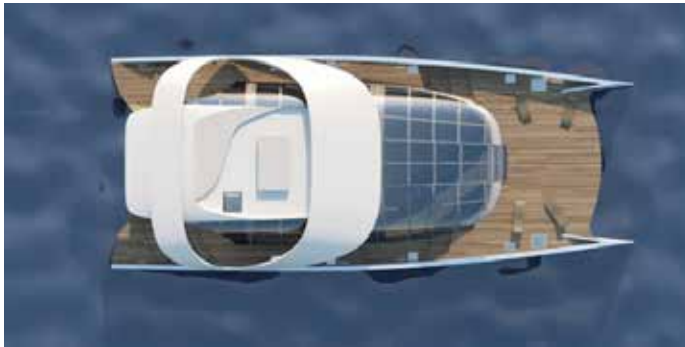

<http://www.charterworld.com/news/oxygene-yachts-air-range-pres...>

AIR 99 superyacht - aft view© Oxygene Yachts

Since then, Oxygène Yachts has signed a partnership agreement with [Couach Shipyard](#) for the construction of the definitive version. This model will be presented to the press and public for trials during Spring 2015.

But Oxygène Yachts didn't just stop there. During the course of 2014, the brand has expanded by adding three new models to form a well-balanced range of 66 to 99 foot boats. Three new worthy representatives of the Oxygène spirit will be presented at this year's Cannes Yachting Festival.

AIR 99 Yacht from above© Oxygene Yachts

Spirit of OXYGENE : purity and discretion... a unique stance

The remarkable design of Oxygène Yachts sprung from designer [Frédéric Sarfati](#)'s strong determination: to breathe new aesthetic inspiration into the universe of power catamarans. This inspiration is driven by the relentless quest for pure lines and on-board space. A quest for subtlety and balance that allows the boat to blend into its surrounding environment.

AIR 77 Yacht - Profile© Oxygene Yachts

The result is impressive: a highly characteristic design rendered timeless by the simplicity of its lines. The name of the range does justice to this notion of space and movement: AIR.

Nothing glitzy or ostentatious about the Air boat range.

Oxygene Yachts Air range to be presented at this month's Cannes...

<http://www.charterworld.com/news/oxygene-yachts-air-range-pres...>

Luxury yacht AIR 77 - aft view© Oxygene Yachts

AIR range: harmony and sensuality

The lightness of the models in the Air range, made with strip planking (wood/epoxy and glass/carbon composite), their shallow draught and Ultrajet/Masterjet turbine engines give them a major technical advantage: they are incredibly easy to handle. They get as close as possible to the coastline, and weave easily in and out of small bays and creeks, even the most imposing models of the line!

The choice of engines goes towards defining the brand's spirit, with a intentionally restricted top speed for each model and very reasonable fuel consumption.

AIR 77 Yacht - Saloon© Oxygene Yachts

The Air 66 yacht is the most compact boat in the range. With all the characteristics of the Air 77, it is even easier to handle and takes up less space when docked. With 2152 sq ft of living space for a length of just 66 feet, life onboard the Air 66 centres around the "carré" which alone offers an area of 645 sq ft for sharing enjoyable moments. With its glass roof and front opening, the view from the stern reveals a 52 ft perspective in the axis of the boat and an unbroken view of the horizon.

As a development on the Air 77 yacht, the Air 77 W yacht essentially presents aesthetical variations: raised bulwarks, remodelled hulls and deck, dingy integrated under the main deck... It illustrates all the design and variation opportunities of a concept that Frédéric Sarfati's brush stroke adapts to each client's individual desires.

AIR 77 Yacht - Cabin© Oxygene Yachts

Air 99 – the No-limit yacht. At the very least the 99 foot superyacht Air 99 is out of the ordinary, offering six cabins and 4305 sq ft of living space! While maintaining the harmony inherent to the concept of the AIR range, this boat makes its mark with an impression of outrageous serenity and sensuality. The 1292 sq ft “carré” designed in the style of a loft offers a unique sensation of freedom. The 88 foot perspective unfolds uninterrupted towards the horizon through the vast doorway at the front, suggesting an invitation to escape offered by no other boat today.

INNOVATION: variable transparency glass

To fit out the glass roofs present on each model in the AIR range, Oxygène Yachts looked at integrating variable transparency glass, a revolution in the nautical sector that finally makes it possible for widespread use of bay windows with no fear of adverse effects from the sun.

The double glazing becomes darker or brighter according to the amount of sunlight thanks to an electronic process incorporated into the glass. At the heart of this process is an electrochromatic coating and a low voltage current making it possible to constantly adapt the tint of the glass to variations in sunlight. The more sunlight there is, the more the glass darkens. It restricts light transmission and limits heat generation. When sunlight is weak, the transparent glass allows the light in, optimising the beneficial effects of the solar flux.

<http://www.charterworld.com/news/oxygene-yachts-air-range-pres...>

AIR 77 W Yacht © Oxygene Yachts

Controlling the lightness level is as simple as the touch of a button on the wall. It can also be done automatically with a light intensity sensor.

By using variable transparency glass, the Air concept and its vast curved windows maximizing light takes on its true meaning.

AIR 66 Yacht © Oxygene Yachts

AIR 66 Yacht – SPECIFICATIONS

Hull length 19 m / 66'

Beam 9,50 m / 31'

Draught 0,80 m

Top speed 12 to 30 knots

Engines Volvo 2 x 300 to 600 hp

Propellers UltraJet / MasterJet turbines

Cabins 4 cabins + 2 crew cabins

Design Frédéric Sarfati

Naval architecture Couach Shipyard

Construction In collaboration with Couach Shipyard

AIR 77 W Yacht – SPECIFICATIONS

Hull length 23,50 m / 77'

Beam 10,40 m / 34'

Draught 0,80 m

Top speed 14 to 22 knots

Cabins 4 cabins + 2 crew cabins

Design Frédéric Sarfati

Naval architecture Couach Shipyard

Construction In collaboration with Couach Shipyard

AIR 99 Yacht – SPECIFICATIONS

Hull length 30 m / 99'

Beam 11,80 m / 38'

Draught 1,4 m

Top speed 20 to 30 knots

Engines MTU 2 x 800 to 1600 hp

Propellers UltraJet / MasterJet turbines

Hulls and superstructure Wood / epoxy / glass / carbon composite

Glass roof Anti-UV moulded Plexiglas or variable transparency glass

Cabins 6 cabins + 2 crew cabins

Design Frédéric Sarfati

Oxygene Yachts Offer a Four Boat Range of Powered Multihulls

Posted: 3rd September 2014 | Written by: Oxygene Yachts

In September 2013, Oxygène Yachts presented its Air 77 prototype at Cannes: a power catamaran with an exceptional design challenging old habits in the industry and establishing a new idea of space and fluidity of movement.

In addition to its highly characteristic design, the Air 77 also attracted attention for its huge 33 sq ft door cut into the front of the roof: a move away from the traditional way of separating indoor and outdoor space. The result offers an entirely unobstructed

space and view on the main deck.

Since then, Oxygène Yachts has signed a partnership agreement with Couach Shipyard for the construction of the definitive version. This model will be presented to the press and public for trials during Spring 2015.

Oxygène Yachts didn't just stop there. During the course of 2014, the brand has expanded by adding three new models to form a well-balanced range of 66 to 99 foot boats. Three new worthy representatives of the Oxygène spirit will be presented at this year's Cannes Yachting Festival.

power catamarans. This inspiration is driven by the relentless quest for pure lines and on-board space. A quest for subtlety and balance that allows the boat to blend into its surrounding environment.

The result is impressive: a highly characteristic design rendered timeless by the simplicity of its lines. The name of the range does justice to this notion of space and movement - AIR.

The lightness of the models in the Air range, made with strip planking (wood/epoxy and glass/carbon composite), their shallow draught and Ultrajet/Masterjet turbine engines give them a major technical advantage: they are incredibly easy to handle.

They get as close as possible to the coastline, and weave easily in and out of small bays and creeks, even the most imposing models of the line! The choice of engines goes towards defining the brand's spirit, with a intentionally restricted top speed for each model and very reasonable fuel consumption.

The Air 66 is the most compact boat in the range. With all the characteristics of the Air 77, it is even easier to handle and takes up less space when docked. With 2152 sq ft of living space for a length of just 66 feet, life onboard the Air 66 centres around the "Saloon" which alone offers an area of 645 sq ft for sharing enjoyable moments. With its glass roof and front opening, the view from the stern reveals a 52 ft perspective in the axis of the boat and an unbroken view of the horizon.

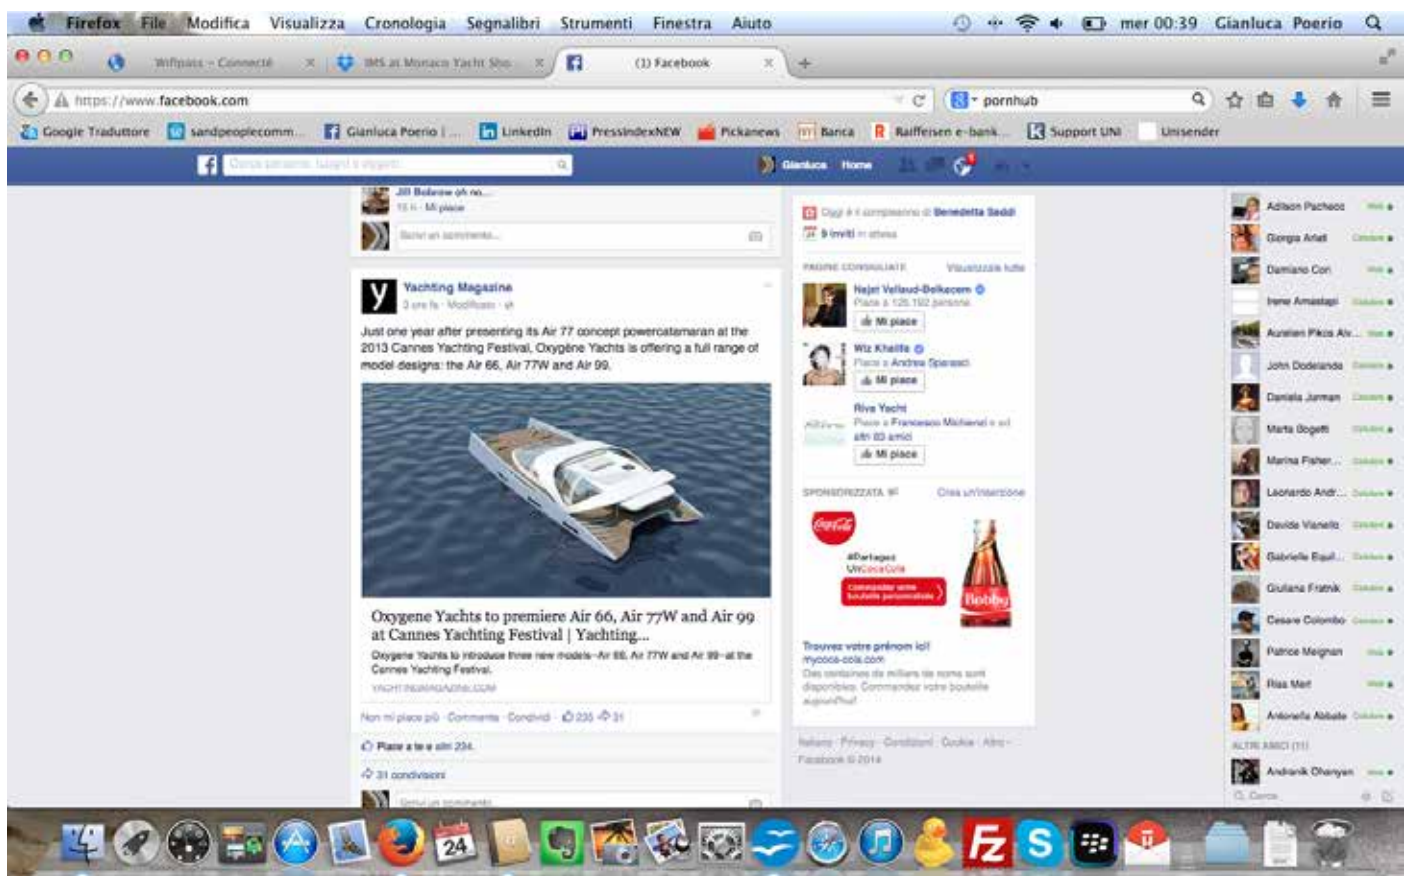

As a development on the Air 77, the Air 77 W essentially presents aesthetical variations: raised bulwarks, remodelled hulls and deck, dingy integrated under the main deck. It illustrates all the design and variation opportunities of a concept that Frédéric Sarfati's brush stroke adapts to each client's individual desires.

Air 99 – the No-limit yacht. At the very least the 99 foot Air 99 is out of the ordinary, offering six cabins and 4305 sq ft of living space! While maintaining the harmony inherent to the concept of the AIR range, this boat makes its mark with an impression of outrageous serenity and sensuality. The 1292 sq ft "carré" designed in the style of a loft offers a unique sensation of freedom. The 88 foot perspective unfolds uninterrupted towards the horizon through the vast doorway at the front, suggesting an invitation to escape offered by no other boat today.

The AIR range will be unveiled to media and the public at the Cannes Yachting Festival from 9th to 14th September 2013.

The Sky's the Limit

Oxygène Yachts has three new models for Cannes: the Air 66, Air 77W and Air 99.

Published: September 8, 2014

Related Tags: [Yachts \(/yachts/\)](#) / [Motoryachts \(/yachts/motoryachts/\)](#) / [Mediterranean \(/geo/mediterranean/\)](#) / [Motoryachts \(/boat-type/motoryachts/\)](#) / [Cannes Boat Show \(/event/cannes-boat-show/\)](#)

Just one year after presenting its Air 77 concept powercatamaran at the 2013 Cannes Yachting Festival, Oxygène Yachts is returning to the show with a full range of model designs: the Air 66, Air 77W and Air 99.

Designer Frédéric Sarfati penned all the Air models to be constructed with strip planking, as wood/epoxy and glass/carbon composites. The expansive use of glass is possible thanks to an electrochromatic coating and low-voltage current that make the double-glazed glass darker or brighter depending on how much sunlight strikes it. The effect also can be controlled manually at the touch of a button.

The Air 66 has 2,152 square feet of living space — quite noteworthy for a 66-foot yacht — along with a glass roof and a front-opening door to the foredeck.

The Air 77W is essentially the original Air 77 with several aesthetic variations including raised bulwarks, remodeled hulls and deck, and a tender space integrated under the main deck.

The Air 99 takes the amount of onboard space up to 4,305 square feet, including six guest staterooms. It, too, has the front-opening door to the foredeck. Couach Shipyard is going to handle construction on the Air 77, which is expected to launch in early 2015. No construction plans were announced for the three new models.

The cover of the Skylife BUSINESS magazine for October 2014 features a vibrant photograph of a yellow tram traveling up a steep, narrow cobblestone street in Lisbon. The street is lined with historic buildings, and several pedestrians are visible, including a man in a blue shirt and shorts in the foreground. A green car is parked on the left side of the street. The magazine's title 'Skylife BUSINESS' is prominently displayed in large white letters at the top. Below the title, the issue number '10 | 2014' is printed. In the top right corner, the Turkish Airlines logo is visible. At the bottom right, the text 'STAR ALLIANCE MEMBER' is accompanied by the Star Alliance logo. The overall scene captures the essence of a historic European city.

CRUISING IN THE SKY LOUNGE...

As its name implies, the 2013 Air Series of the French Oxygene Yachts promises a voyage that is quite unlike that provided by a standard catamaran. The Air 77, measuring almost 24 meters in length and providing 280 square meters of living space, is unique as it blurs the lines between in and out of doors and between its open and enclosed spaces. Built of wood, glass, epoxy and carbon, this ultra light catamaran gives passengers the sense of being completely in the open. And one gets this feeling while not only on deck, but also below. The mobile design and provisions of maximum natural sunlight give the boater the sensation of ultimate freedom and immersion into nature, not only in the top quarters, but even in the under-deck cabins.

Oftentimes it is difficult to steer a catamaran into small coves or harbors, but the Oxygene has been designed with a low draft that allows it access into almost any kinds of conditions. This year the Air 77 (which burns only 80 liters per hour at maximum speed) used the Cannes Boat Show to display all of its features.
